Software Engineer | Full-Stack Developer

I'm a full stack developer with a knack for organization, leadership, and expediency. Having been a founder of a startup, I have an affinity for creating impactful systems that solve nuanced problems. This translates into effective top-down software creation. Allocating resources, organizing operations, managing time efficiently, adapting to unforeseen circumstances - these are the weapons of entrepreneurs and developers alike.

EDUCATION

Software Engineering Immersive, General Assembly 480+ Hours, May 2023

TECHNICAL SKILLS

LANGUAGES: HTML5, CSS, Javascript, Python, Typescript

DATABASES: Postgres, MongoDB

Libraries/Frameworks: MERN Stack(Mongoose/MongoDB, Express.js, React, Node.js), Jest, Passport, Django, Nextjs

MISC: Agile, Git, Github, VScode, AWS, Heroku, Netlify, Vercel, WSL, Ubuntu, Linux, Vite

SOFTWARE ENGINEERING PROJECTS

News Match - Full-stack article scroller with the user experience of Tinder; consumes a third-party api, and has a RESTful express backend, fully mobile responsive - built in a 5 day scrum sprint.

- Technologies used: Next.js, React.js, Express.js, Node, Auth0, Vercel, Heroku, Currents API
- [Deployed Link](#) and <https://github.com/Madfarm/newsMatch>

Vichat - Full-stack video chat web app using Django and postgres including Django auth, friends lists and full 1-on-1 video calling functionality.

- Technologies used: Django, Python, Postgres, AWS, Heroku, Javascript, Tailwind, Agora SDK
- [Deployed Link](#) and https://github.com/Madfarm/Vichat_Project3
